Tables of ADES Tags and Structures

March 29, 2017

1 Table of ADES Elements

XML elements are the things which appear as XML tags, such as <permID> value </permID>. The ones in this table are all top-level elements, which means they can be the root of their own XML document and thus validated against XSD individually. The last element in the table, "ades," is intended to be used as the root element for every XML document used for interchange. All elements are written in camelCase with the first character not capitalized.

Elements and their Descriptions

ADES observation sub-elements			
Name	Type	Description	
permID	PermIDType	IAU permanent designation,	
	,	i.e., IAU number	
provID	ProvIDType	MPC provisional designation	
		(unpacked form) for	
		unnumbered object	
artSat	StringType	Name of an artificial satellite	
trkSub	TrkSubType	Observer-assigned tracklet	
		identifier, unique within	
		submission batch.	
obsID	ObsIDType	Globally Unique Observation ID	
		assigned by MPC	
trkID	TrkIDType	Globally Unique alphnumeric	
		tracklet ID assigned by MPC	
mode	ModeType	Mode of optical and offset	
		observations.	
stn	StationType	Obervatory code from MPC list.	
trx	StationType	Station code of transmiting	
		antenna.	
rcv	StationType	Station code of receiving	
		antenna.	
sys	SysType	Coordinate system for station	
		coordinates and covariance.	

(commuea)	1		
ctr	xsd:integer	Origin of the reference system. Use public SPICE codes, e.g.,	
		399 is the geocenter, 10 is the	
		,	
		Sun center. Note; sys=WGS84	
nog1	xsd:decimal	implies ctr=399	
pos1		Position of observer, first value.	
pos2	xsd:decimal	Position second value per sys	
pos3	xsd:decimal	Position third value per sys	
posCov11	xsd:decimal	11 covariance per sys	
posCov12	xsd:decimal	12 covariance per sys	
posCov13	xsd:decimal	13 covariance per sys	
posCov22	xsd:decimal	22 covariance per sys	
posCov23	xsd:decimal	23 covariance per sys	
posCov33	xsd:decimal	33 covariance per sys	
prog	ProgType	Program code as assigned by	
		the MPC.	
obsTime	TimeType	UTC time of the observation in	
		ISO 8601 format, i.e.,	
		yyyy- mm - $ddThh:mm:ss.ssZ$.	
ra	RAType	J2000.0 Astrometric equatorial	
		right ascension in decimal	
		degrees.	
dec	DeclinationType	J2000.0 Astrometric equatorial	
		declination in decimal degrees.	
		Positive DEC values may	
		optionally include a + sign	
raStar	RAType	J2000.0 RA in decimal degrees	
		of the occulted star	
decStar	DeclinationType	J2000.0 DEC in decimal degrees	
		of the occulted star	
obsCenter	ObsCenterType	Center of offset observation may	
		be planet or other body with	
		PermID or ProvID	
	The state of the s		

	. 1 1 1	M 1 A (DA DEC):
deltaRA	xsd:decimal	Measured $\Delta(RA\cos DEC)$ in
		arcseconds. For offset
		measurements of a satellite with
		respect to its primary, or for
		occultation observations with
		respect to the star in
		rectangular coordinates, J2000.0
		frame.
deltaDec	xsd:decimal	Measured ΔDEC in arcseconds.
		For offset measurements of a
		satellite with respect to its
		primary, or for occultation
		observations with respect to the
		star in rectangular coordinates,
		J2000.0 frame
dist	PosDecimalType	Measured distance in
		arcseconds. For offset
		measurements of a satellite with
		respect to its primary, or for
		occultation observations with
		respect to the star in polar
		coordinates.
pa	RAType	Measured position angle in
		degrees. For offset
		measurements of a satellite with
		respect to its primary, or for
		occultation observations with
		respect to the star in polar
		coordinates.
rmsRA	PosDecimalType	Random component of the
		RA \cos DEC 1σ uncertainty in
		arcseconds as estimated by the
		observer as part of the image
		processing and astrometric
		reduction.

(continued)		T
rmsDec	PosDecimalType	Random component of the DEC 1σ uncertainty in arcseconds as
		estimated by the observer as
		part of the image processing
		and astrometric reduction.
rmsDist	PosDecimalType	Random component of the
	1 oob comment ype	distance 1σ uncertainty in
		arcseconds as estimated by the
		observer as part of the image
		processing and astrometric
		reduction.
rmsPA	PosDecimalType	Random component of the polar
THISTA	rosDecimarrype	
		angle 1σ uncertainty in degrees
		as estimated by the observer as
		part of the image processing
	G D : ITT	and astrometric reduction.
rmsCorr	CorrDecimalType	Correlation between RA and
		DEC or dist and PA that may
		result from the astrometric
		reduction. This is derived from
		the RA-DEC or dist-PA
		covariance matrix, where the
		off-diagonal term is
		rmsCorr * rmsRA * rmsDec or
		rmsCorr * rmsDist * rmsPA.
delay	PosDecimalType	Observed radar delay value in
		seconds.
rmsDelay	PosDecimalType	Measurement 1σ uncertainty in
		µs for radar delay
doppler	xsd:decimal	observed radar doppler value in
		Hz
rmsDoppler	PosDecimalType	Measurement 1σ uncertainty in
		Hz for radar doppler

[collulation]	CAT	C1	
astCat	CatType	Star catalog used for the	
		astrometric reduction or for the	
		occulted star in the case of	
		occultation observations.)	
mag	xsd:decimal	Apparent Magnitude in	
		specified band	
rmsMag	PosDecimalType	Apparent magnitude 1σ	
		uncertainty in magnitudes.	
band	BandType	Filter designation for	
		photometry.	
photCat	CatType	Star catalog used for	
		photometry measurements.	
photAp	PosDecimalType	Photometric aperture radius in	
		arcseconds.	
nucMag	LogicalType	Nuclear magnitude flag for	
		comets. 0 for total magnitude	
		(i.e., for most archival comet	
		observations and all asteroid	
		observations), 1 for nuclear	
		magnitude. Primarily used for	
		archival data as photAp should	
		be used to communicate this	
		information in the new standard	
$\log SNR$	xsd:decimal	\log_{10} of the signal-to-noise ratio	
10801110	1154.400111141	of the source in the image	
		integrated on the entire	
		aperture used for the	
		astrometric centroid.	
seeing	PosDecimalType	Size of seeing disc in arcseconds,	
scenig	1 osbecimari y pe	measured at Full Width Half	
		Maximum (FWHM) of target	
		` ,	
2777	Dog Dogima l'Tres	point spread function (PSF).	
exp	PosDecimalType	Exposure time in s. Total	
		exposure time in the case of	
		stacked image detections	

(commuea)			
m rmsFit	PosDecimalType	RMS of fit of astrometric	
		comparison stars in arcseconds.	
nStars	xsd:positiveInteger	Number of stars in astrometric	
		fit.	
com	LogicalType	Flag to indicate that the	
		observation is reduced to the	
		center of mass. 0 implies a	
		measurement to the peak power	
		position, which is usually	
		interpreted as the leading edge	
		of the target, with the reflection	
		point being modeled one object	
		radius prior to the center of	
		mass.	
frq	PosDecimalType	Carrier reference frequence in	
		MHz	
ref	RefType	Standard reference field used for	
		citations.	
disc	DiscType	Discovery flag; '*' marks a new	
		discovery record; '+' marks the	
		first measurement of a	
		previously observed object;	
		otherwise not present	
subFmt	SubFmtType	Format in which the	
		observation was originally	
		submitted to the MPC, e.g.,	
		M92 for MPC1992 format or	
		A17 for the current standard	
		standard. Filled by the MPC	
		according to a list provided and	
		maintained by the MPC.	
subFrm	SubFrmType	Reference frame for the original	
		submission of reported angular	
		measurements.	

of the reported obeservation time for archived MPC1992 data records PrecRA RaDecPrecType Precision in seconds of the reported RA for archived MPC1992 data records. PrecDec RaDecPrecType Precision in arcseconds of the reported DEC for archived MPC1992 data records. UncTime PosDecimalType Estimated time uncertainty in seconds. Unlike the preceding RMS fields, which indicate random errors, this field indicates a presumed level of systematic clock error. NB: This field is generally only to be used to communicate exceptions and problems with clock calibration and is not intended to be used in routine submissions where clock errors are not a significant source of astrometric error. Notes NotesType A set of one-character note flags to communicate observing circumstances. Comment field provided by the observer. 2 Table of Restricted Simple Types

Restricted simple types are a single XML value with some additional restrictions, such as requiring an decimal value to be in some range (such as 0.0 to 90.0) or requiring a string to be from an enumerated list. Some of these restrictions, such as the possible station string values, will eventually be pulled out of MPC-provided files and referenced over the web.

Simple	Types	with	their	Restrictions
Type				Description

Type Description

	Description
AlphaNumericType	AlphaNumericType restricts the field to only
base is StringType	the ASCII upper- and lower-case letters,
-pattern: [A-Za-z0-9_]*	ASCII numbers and underscores
BandType	MPC maintains a list of bands for magnitude
base is AlphaNumericType	observations
-maxLength: 3	
CatType	MPC maintains a list of current astrometry
base is AlphaNumericType	and photometry catalogs
-maxLength: 8	
CorrDecimalType	CorrDecimal in range [-1.0, 1.0]
base is xsd:decimal	
-minInclusive: -1.0	
-maxInclusive: 1.0	
DeclinationType	DEC in degrees in range [-90.0, 90.0]
base is xsd:decimal	
-minInclusive: -90.0	
-maxInclusive: 90.0	
DeprecatedType	X marks the use of deprecated data
base is xsd:string	
-enumeration: x	
$\mathbf{DiscType}$	Used to mark the discovery record – must be
base is xsd:string	'*' or '+' if present
-enumeration: *	
-enumeration: +	
SubFrmType	The submission frame, usually B1950.0 or
base is StringType	earlier. If this field is not present, the
-pattern: ([BJ]\d{4}.0) APP\.	submission frame was J2000.0

	(/
Type		Description

Description
A permID (permanent ID) string may be a
positive integer, a positive integer followed by
P or D, a planet name followed by a positive Jupiter Saturn Uranus Neptune \d(1,3) \(\((\d+\) \d(1,3)) \d(1,3) \) integer, or a positive integer in parentheses
followed by a postive integer. These indicate
a minor planet, a comet, a natural satellite of
a planet, and a natural satellite of a minor
planet respectively.
1 v
Photometric model is up to eight
alphanumeric characters
List of planet names, including Earth's Moon
PositiveDecimal in range (0.0, +inf)
MPC maintains a list of 1 and 2 character
program codes

	(commuda)	
Type	Description	
ProvIDType	A provID (provisional ID) is may be a minor	
base is xsd:string	planet provid, which is a 4-digit year followed	
-pattern: \d{4} [A-HJ-Y][A-HJ-Z]\d* \d{4}	by a space followd by two letters followed [PT]-[L123] [ADCPX] \\ Ad{4} [A-Z]{1,2}\d?(-[A-Z])? s(Ad{4}) optinally by digits; or a comet it, which is C/	├ ((M J S U N) \((\d+ \d{4}
	or P/ or D/ or X/ or A/ (for asteroids with	
	comet numbers, which may not have	
	fragments) followed by a 4-digit year follwed	
	by a space followed by one or two digits	
	optinally followed by one or two digits	
	optionally followed by "-[A-Z]" (for a commet	
	fragment); or a satellite, which is S/ followed	
	by a 4-digit year followed a space followed	
	either (by a minor planet PermID in	
	parentheses or the bare letter M, J, S, N, U)	
	followed by a space followed by digits.	
RaDecPrecType	RaDecPrecType is used to describe the	
base is xsd:decimal		
-enumeration: 0.1	precision of a decimal value when the orignal	
-enumeration: 0.6	measurement was made in sexagesimal. The	
-enumeration: 0.01	allowed values are applied to the last	
-enumeration: 0.001	sexagesimal element, which may be seconds	
-enumeration: 60	or arcseconds, and mean (for time) the value	
-enumeration: 6 -enumeration: 1	is accurate to an hour, 10 minutes, 1 minute,	
-enumeration: 1 -enumeration: 60.0	6 seconds, 1 second, .1 second and so forth.	
-enumeration: 6.0		
-enumeration: 1.0		
RAType	RA in degrees limited to [0.0, 360.0)	
base is xsd:decimal		
-minInclusive: 0.0		
-maxExclusive: 360.0		
RefType	MPC-assigned reference, up to sixteen	
base is StringType	characters	
-maxLength: 16	A 1: 0: 1: 1: 200 1	
RemarkType	A remark is a String limited to 200 characters	

to be cont'd on next page

base is StringType
-maxLength: 200

Type	Description
SelResType base is xsd:string -enumeration: A -enumeration: D -enumeration: d	SelRes must be "A," (automatic accept) "a," (manual accept) "D," (automatic delete) or "d" (manual delete)
StationType base is AlphaNumericType -minLength: 3 -maxLength: 4	A stn, rov, trx or tcv station. Values vary and are checked by MPC
StringType base is xsd:string -pattern: [^]*[\w-[]][^]*	String follows the ADES specification in that the pipe character is disallowed in PSV. To allow data conversion from XML, it must disallowed in XML as well. Also disallow blank elements. Therefore, all elements must match this pattern
SubFmtType base is AlphaNumericType -maxLength: 4	MPC maintains a list of allowed submission formats with no extra fields, up to four alphanumeric characters
SysType base is xsd:string -enumeration: WGS84 -enumeration: ITRF -enumeration: IAU -enumeration: ICRF_AU -enumeration: ICRF_KM	Coordinate system for station coordinates. This is used by the pos[123] and poscov[123][123] elements to determine the meaning of coordinates. WGS84, ITRF and IAU are for ground-based stations, ICRF_AU and ICRF_KM are for space-based stations.
TimeHelp base is xsd:dateTime -pattern: \d{4}-\d{2}-\d{2}T\d{2}:\d{2}:\d	
TimePrecType base is xsd:decimal -enumeration: 100000 -enumeration: 10000 -enumeration: 1000 -enumeration: 100 -enumeration: 10 -enumeration: 1	TimePrecType is used to describe the precision of a Time value when the orignal measurement was made in fractional days. The accuracy is in millionths of decimal day, so 10 means 1/100,000 of a day, a little better than a second. The large values are only for historic data on comets.

(continued) Description

	(0011011111001)
Type	Description
TimeType	TimeType is an ISO8601 UTC time in the
union of	format yyyy-mm-ddThh: $mm:ss(.s+)Z$. The
TimeHelp LeapSecondsHelp	trailing Z means it is interpreted as UTC. It
	is not a restriction of xsd:dateTime because
	that does not properly validate leapseconds.
	It allows positive 4-digit years and validates
	the Gregorian calendar for all dates. Note
	this works because xsd or's all the restrictions
	and accepts any match. LeapSecondsHelp
	matches any leapsecond before 2017 and any
	potential new leapseconds from 2017.
TrkIDType	A trkID is up to twelve alphanumeric
base is AlphaNumericType	characters
-maxLength: 12	
TrkSubType	A trkSub is up to eight alphanumeric
base is AlphaNumericType	characters
-maxLength: 8	
VersionType	Version attribute for the current ADES
base is xsd:string	schema must be "2017"
-enumeration: 2017	

3 Groups

This is the documentation for the groups. Groups are a convenient way of organizing rules in complicated structures, used as components of other groups or of complex types. Unlike complex types, groups may appear inside other complex types or groups with no tag. Because groups act a bit like types, their names are all CamelCase with the first letter capitalized.

grouptype: MPCID

4 Complex Types

This is the documentation for the complex types, which may be used directly as similarly-named elements or as components of other complex types and groups. Unlike a group, a complex type is always the only thing inside a tag. The names of complex types, like groups and simple types, are all CamelCase with the first letter capitalized.

complextype: NamesType
