Tables of ADES Tags and Structures

November 16, 2018

1 Table of ADES Elements

XML elements are the things which appear as XML tags, such as <permID> value </permID>. The ones in this table are all top-level elements, which means they can be the root of their own XML document and thus validated against XSD individually. The last element in the table, "ades," is intended to be used as the root element for every XML document used for interchange. All elements are written in camelCase with the first character not capitalized.

Elements and their Descriptions

ADES observation sub-elements		
Name	Type	Description
permID	PermIDType	IAU permanent designation,
	,	i.e., IAU number
provID	ProvIDType	MPC provisional designation
		(unpacked form) for
		unnumbered object
artSat	StringType	Name of an artificial satellite
trkSub	TrkSubType	Observer-assigned tracklet
		identifier, unique within
		submission batch.
obsID	ObsIDType	Globally Unique Observation ID
		assigned by MPC
trkID	TrkIDType	Globally Unique alphnumeric
		tracklet ID assigned by MPC
mode	ModeType	Mode of optical and offset
		observations.
stn	StationType	Obervatory code from MPC list.
trx	StationType	Station code of transmiting
		antenna.
rcv	StationType	Station code of receiving
		antenna.
sys	SysType	Coordinate system for station
		coordinates and covariance.

(commuea)	1	
ctr	xsd:integer	Origin of the reference system. Use public SPICE codes, e.g.,
		399 is the geocenter, 10 is the
		,
		Sun center. Note; sys=WGS84
nog1	xsd:decimal	implies ctr=399
pos1		Position of observer, first value.
pos2	xsd:decimal	Position second value per sys
pos3	xsd:decimal	Position third value per sys
posCov11	xsd:decimal	11 covariance per sys
posCov12	xsd:decimal	12 covariance per sys
posCov13	xsd:decimal	13 covariance per sys
posCov22	xsd:decimal	22 covariance per sys
posCov23	xsd:decimal	23 covariance per sys
posCov33	xsd:decimal	33 covariance per sys
prog	ProgType	Program code as assigned by
		the MPC.
obsTime	TimeType	UTC time of the observation in
		ISO 8601 format, i.e.,
		yyyy- mm - $ddThh:mm:ss.ssZ$.
ra	RAType	J2000.0 Astrometric equatorial
		right ascension in decimal
		degrees.
dec	DeclinationType	J2000.0 Astrometric equatorial
		declination in decimal degrees.
		Positive DEC values may
		optionally include a + sign
raStar	RAType	J2000.0 RA in decimal degrees
		of the occulted star
decStar	DeclinationType	J2000.0 DEC in decimal degrees
		of the occulted star
obsCenter	ObsCenterType	Center of offset observation may
		be planet or other body with
		PermID or ProvID
	The state of the s	

deltaRA xsd:decimal Measured Δ(RA cos DEC) in arcseconds. For offset measurements of a satellite with respect to its primary, or for occultation observations with respect to the star in rectangular coordinates, J2000.0 frame. deltaDec xsd:decimal Measured ΔDEC in arcseconds. For offset measurements of a satellite with respect to its primary, or for occultation observations with respect to the star in rectangular coordinates, J2000.0 frame dist PosDecimalType Measured distance in arcseconds. For offset measurements of a satellite with respect to its primary, or for occultation observations with respect to the star in polar coordinates. pa RAType Measured position angle in degrees. For offset measurements of a satellite with respect to its primary, or for occultation observations with respect to the star in polar coordinates. rmsTime PosDecimalType Random component of the obsTime 1σ uncertainty in seconds as estimated by the observer. seconds as estimated by the	rmsTime	PosDecimalType	Random component of the
· · ·			obsTime 1σ uncertainty in
observer.			seconds as estimated by the
			observer.

(continued)	D D : 177	D 1
rmsRA	PosDecimalType	Random component of the RA cos DEC 1σ uncertainty in arcseconds as estimated by the observer as part of the image processing and astrometric reduction.
rmsDec	PosDecimalType	Random component of the DEC 1σ uncertainty in arcseconds as estimated by the observer as part of the image processing and astrometric reduction.
rmsDist	PosDecimalType	Random component of the distance 1σ uncertainty in arcseconds as estimated by the observer as part of the image processing and astrometric reduction.
rmsPA	PosDecimalType	Random component of the polar angle 1σ uncertainty in degrees as estimated by the observer as part of the image processing and astrometric reduction.
rmsCorr	CorrDecimalType	Correlation between RA and DEC or dist and PA that may result from the astrometric reduction. This is derived from the RA-DEC or dist-PA covariance matrix, where the off-diagonal term is rmsCorr * rmsRA * rmsDec or rmsCorr * rmsDist * rmsPA.
delay	PosDecimalType	Observed radar delay value in seconds.
rmsDelay	PosDecimalType	Measurement 1σ uncertainty in μ ps for radar delay

doppler	xsd:decimal	observed radar doppler value in Hz
rmsDoppler	PosDecimalType	Measurement 1σ uncertainty in Hz for radar doppler
astCat	CatType	Star catalog used for the astrometric reduction or for the occulted star in the case of occultation observations.)
mag	xsd:decimal	Apparent Magnitude in specified band
rmsMag	PosDecimalType	Apparent magnitude 1σ uncertainty in magnitudes.
band	BandType	Filter designation for photometry.
photCat	CatType	Star catalog used for photometry measurements.
photAp	PosDecimalType	Photometric aperture radius in arcseconds.
nucMag	LogicalType	Nuclear magnitude flag for comets. 0 for total magnitude (i.e., for most archival comet observations and all asteroid observations), 1 for nuclear magnitude. Primarily used for archival data as photAp should be used to communicate this information in the new standard
logSNR	xsd:decimal	\log_{10} of the signal-to-noise ratio of the source in the image integrated on the entire aperture used for the astrometric centroid.

(continued)		
seeing	PosDecimalType	Size of seeing disc in arcseconds, measured at Full Width Half Maximum (FWHM) of target point spread function (PSF).
exp	PosDecimalType	Exposure time in s. Total exposure time in the case of stacked image detections
rmsFit	PosDecimalType	RMS of fit of astrometric comparison stars in arcseconds.
nStars	xsd:positiveInteger	Number of stars in astrometric fit.
com	LogicalType	Flag to indicate that the observation is reduced to the center of mass. 0 implies a measurement to the peak power position, which is usually interpreted as the leading edge of the target, with the reflection point being modeled one object radius prior to the center of mass.
\mathbf{frq}	PosDecimalType	Carrier reference frequence in MHz
ref	RefType	Standard reference field used for citations.
disc	DiscType	Discovery flag; '*' marks a new discovery record; '+' marks the first measurement of a previously observed object; otherwise not present

(continued)	0.15	
\mathbf{subFmt}	SubFmtType	Format in which the
		observation was originally
		submitted to the MPC, e.g.,
		M92 for MPC1992 format or
		A17 for the current standard
		standard. Filled by the MPC
		according to a list provided and
		maintained by the MPC.
subFrm	SubFrmType	Reference frame for the original
		submission of reported angular
		measurements.
precTime	TimePrecType	Precision in millionths of a day
F-302-1111		of the reported obeservation
		time for archived MPC1992
		data records
precRA	RaDecPrecType	Precision in seconds of the
preciur	readect recrypt	reported RA for archived
		MPC1992 data records.
precDec	RaDecPrecType	Precision in arcseconds of the
precided	Trabect fectype	reported DEC for archived
		MPC1992 data records.
uncTime	D D : 1/T	
uncime	PosDecimalType	Estimated time uncertainty in
		seconds. Unlike the preceding
		RMS fields, which indicate
		random errors, this field
		indicates a presumed level of
		systematic clock error. NB:
		This field is generally only to be
		used to communicate exceptions
		and problems with clock
		calibration and is not intended
		to be used in routine
		submissions where clock errors
		are not a significant source of
		astrometric error.

(continued)		
notes	NotesType	A set of one-character note flags
		to communicate observing
		circumstances.
remarks	RemarkType	Comment field provided by the
		observer. This field can be used
		to report additional information
		that is not reportable in the
		notes field, but that may be of
		relevance for interpretation of
		the observations.
deprecated	DeprecatedType	Marks deprecated observation.
localUse	LocalUseType	For user-defined fields in
		observations
0	bservations residua	al sub-elements
Name	Type	Description
orbProd	StringType	Orbit producer. Can be
		institution, individual, or even
		email address, e.g. 'MPC'
orbID	StringType	Local reference for orbit, e.g.,
		'JPL 7' or 'MPO 12345'.
resRA	xsd:decimal	Residuals in RA cos DEC in
		arcseconds
resDec	xsd:decimal	Residuals in DEC in arcseconds
selAst	SelResType	Inclusion/rejection flag for
		astrometry
m sigRA	PosDecimalType	Adopted RA \cos DEC 1σ
		uncertainty in arcseconds.
sigDec	PosDecimalType	Adopted DEC 1σ uncertainty in
		arcseconds.
$\operatorname{sigCorr}$	CorrDecimalType	Adopted correlation between
		RA cos DEC and DEC.
$\mathbf{sigTime}$	PosDecimalType	Adopted 1σ time uncertainty in
		seconds.
biasRA	xsd:decimal	Adopted RA cos DEC bias in
		arcseconds.
ŧ o	be cont'd on next page	20

biasDec	xsd:decimal	Adopted DEC bias in
		arcseconds.
biasTime	xsd:decimal	Adopted time bias in s.
photProd	StringType	Producer of photometric
		residuals. Can be institution,
		individual, or even email
		address, e.g. 'MPC'
resMag	xsd:decimal	Photometric residual in
		magnitudes
selPhot	SelResType	Inclusion/rejection flag for
		photometry
sigMag	PosDecimalType	Adopted 1σ magnitude
		uncertainy in magnitudees.
biasMag	xsd:decimal	Adopted photometric bias in
		magnitudes
photMod	PhotModType	Description of the photometric
		model.
resDelay	xsd:decimal	Residual of the radar
		measurement in µs for delay
selDelay	SelResType	Inclusion/rejection flag for
		radar astrometry
sigDelay	PosDecimalType	Adopted uncertainty for the
		radar measurement in µs for
		delay
resDoppler	xsd:decimal	Residual of the radar
		measurement in Hz for Doppler
selDoppler	SelResType	Inclusion/rejection flag for
		radar astrometry
sigDoppler	PosDecimalType	Adopted uncertainty for the
		radar measurement in Hz for
		Doppler

2 Table of Restricted Simple Types

Restricted simple types are a single XML value with some additional restrictions, such as requiring an decimal value to be in some range (such as 0.0 to 90.0) or requiring a string to be from an enumerated list. Some of these restrictions, such as the possible station string values, will eventually be pulled out of MPC-provided files and referenced over the web.

Simple Types with their Restrictions
Type Description

1 y pc	Description
AlphaNumericType	AlphaNumericType restricts the field to only
base is StringType	the ASCII upper- and lower-case letters,
-pattern: [A-Za-z0-9_]*	ASCII numbers and underscores
BandType	MPC maintains a list of bands for magnitude
base is AlphaNumericType	observations
-maxLength: 3	
CatType	MPC maintains a list of current astrometry
base is StringType	and photometry catalogs
-pattern: [.A-Za-z0-9_]*	
-maxLength: 8	
CorrDecimalType	CorrDecimal in range [-1.0, 1.0]
base is xsd:decimal	
-minInclusive: -1.0	
-maxInclusive: 1.0	
DeclinationType	DEC in degrees in range [-90.0, 90.0]
base is xsd:decimal	
-minInclusive: -90.0	
-maxInclusive: 90.0	
DeprecatedType	X marks the use of deprecated data
base is xsd:string	
-enumeration: x	
DiscType	Used to mark the discovery record – must be
base is xsd:string	'*' or '+' if present
-enumeration: *	
-enumeration: +	
SubFrmType	The submission frame, usually B1950.0 or
base is StringType	earlier. If this field is not present, the
_ v -	earner. If this here is not present, the
-pattern: ([BJ]\d{4}.0) APP\.	submission frame was J2000.0

base is xsd:string	planet provid, which is a 4-digit year followed	
-pattern: \d{4} [A-HJ-Y][A-HJ-Z]\d* \d{4}	by a space followd by two letters followed (P-L)T-[123], [ADCPX]/\d{4} [A-Z] {1,2}\d*(-[A-Z])?]\$/\d{4} optinally by digits; or a comet it, which is C/	((M J S U N) \((\d+ \d{4}
	or P/ or D/ or X/ or A/ (for asteroids with	
	comet numbers, which may not have	
	fragments) followed by a 4-digit year follwed	
	by a space followed by one or two digits	
	optinally followed by one or two digits	
	optionally followed by "-[A-Z]" (for a commet	
	fragment); or a satellite, which is S/ followed	
	by a 4-digit year followed a space followed	
	either (by a minor planet PermID in	
	parentheses or the bare letter M, J, S, N, U)	
	followed by a space followed by digits.	
OldProvIDType	An old-style provID (provisional ID) for	
base is xsd:string	object recorded before 1925 is of the from	
-pattern:	A903 AA, where A903 means 1903, A888	
A[89]\d{2} [A-HJ-Y][A-HJ-Z]	means 1888. and the two letters are the same	
	as currently	

Type	Description		
ProvIDType union of BaseProvIDType OldProvIDType Submissions Only Allow: union of BaseProvIDType	A provID (provisional ID) is may be a minor planet provid, which is a 4-digit year followed by a space followd by two letters followed optinally by digits; or a comet it, which is C/ or P/ or D/ or X/ or A/ (for asteroids with comet numbers, which may not have fragments) followed by a 4-digit year follwed by a space followed by one or two digits optinally followed by one or two digits optionally followed by "-[A-Z]" (for a commet fragment); or a satellite, which is S/ followed by a 4-digit year followed a space followed either (by a minor planet PermID in parentheses or the bare letter M, J, S, N, U) followed by a space followed by digits. For		
RaDecPrecType base is xsd:decimal -enumeration: 0.1 -enumeration: 0.6 -enumeration: 0.01 -enumeration: 0.001 -enumeration: 60 -enumeration: 6 -enumeration: 1 -enumeration: 60.0 -enumeration: 6.0 -enumeration: 6.0 -enumeration: 1.0	data before 1926, the OldProvIDType may occur – this is not allowed in new submissions RaDecPrecType is used to describe the precision of a decimal value when the orignal measurement was made in sexagesimal. The allowed values are applied to the last sexagesimal element, which may be seconds or arcseconds, and mean (for time) the value is accurate to an hour, 10 minutes, 1 minute, 6 seconds, 1 second, .1 second and so forth.		
RAType base is xsd:decimal -minInclusive: 0.0 -maxExclusive: 360.0	RA in degrees limited to [0.0, 360.0)		
RefType base is StringType -maxLength: 16	MPC-assigned reference, up to sixteen characters		

Type	Description
RemarkType base is StringType -maxLength: 300	A remark is a String limited to 300 characters
SelResType base is xsd:string -enumeration: A -enumeration: a -enumeration: D -enumeration: d	SelRes must be "A," (automatic accept) "a," (manual accept) "D," (automatic delete) or "d" (manual delete)
StationType base is AlphaNumericType -minLength: 3 -maxLength: 4	A stn, rov, trx or tcv station. Values vary and are checked by MPC
StringType base is xsd:string -pattern: [^]*[^ \s][^]*	String follows the ADES specification in that the pipe character is disallowed in PSV. To allow data conversion from XML, it must disallowed in XML as well. Also disallow blank elements. Therefore, all elements must match this pattern
SubFmtType base is AlphaNumericType -maxLength: 4	MPC maintains a list of allowed submission formats with no extra fields, up to four alphanumeric characters
SysType base is xsd:string -enumeration: WGS84 -enumeration: ITRF -enumeration: IAU -enumeration: ICRF_AU -enumeration: ICRF_KM TimeHelp	Coordinate system for station coordinates. This is used by the pos[123] and poscov[123][123] elements to determine the meaning of coordinates. WGS84, ITRF and IAU are for ground-based stations, ICRF_AU and ICRF_KM are for space-based stations. Restrict dateTime to 4-digit positive years
base is xsd:dateTime -pattern: \d{4}-\d{2}-\d{2}T\d{2}:\d{2}:\	and Z for UTC 4{2}(\.\d+)?z

	(1)					
(continued)						
Type	Description					
OldTime	Restrict OldTime to match years before 2000					
base is StringType	and only the hh.hhh and hh:mm.mmm					
-pattern: 1\d{3}-(0\d 10 11 12)-([0-2]\d :	formats excluded by xsd:dateTime, with \$\footnote{131}T[0-2]\d(:[0-5]\d)?(\.\d+)?z\$ slightly less value checking for days allowed in					
	months.					
TimePrecType	TimePrecType is used to describe the					
base is xsd:decimal	precision of a Time value when the original					
-enumeration: 100000	measurement was made in fractional days.					
-enumeration: 10000 -enumeration: 1000	The accuracy is in millionths of decimal day,					
-enumeration: 100	so 10 means 1/100,000 of a day, a little better					
-enumeration: 10	than a second. The large values are only for					
-enumeration: 1	historic data on comets.					
TimeType	TimeType is an ISO8601 UTC time in the					
union of	format yyyy-mm-ddThh:mm:ss(.s+)Z. The					
TimeHelp LeapSecondsHelp	trailing Z means it is interpreted as UTC. It					
OldTime	is not a restriction of xsd:dateTime because					
Cook and in the Cook of All and	that does not properly validate leapseconds.					
Submissions Only Allow:	It allows positive 4-digit years and validates					
union of	the Gregorian calendar for all dates. Note					
TimeHelp LeapSecondsHelp	this works because xsd or's all the restrictions					
	and accepts any match. LeapSecondsHelp					
	matches any leapsecond before 2017 and any					
	potential new leapseconds from 2017. The					
	ISO8601 fractional hours and minutes (hh,					
	hh.hh, hh:mm, hh:mm.mmm) is allowed only					
	for existing data and only for dates before					
	2000, and not allowed at all in submissions					
TrkIDType	A trkID is up to twelve alphanumeric					
base is StringType	characters					
-pattern: [-A-Za-z0-9_]*						
-maxLength: 12	A tulcula is up to eight alphanumenia se					
BaseTrkSubType base is StringType	A trkSub is up to eight alphanumeric or -					
-pattern: [-A-Za-z0-9_]*	characters					
-maxLength: 8						
	I.					

Type	(continued) Description
OldTrkSubType base is StringType -pattern: [- ?+@.()/\\A-Za-z0-9_]* -maxLength: 8	A trkSub is up to eight funky characters
TrkSubType union of BaseTrkSubType OldTrkSubType	A trkSub is up to eight characters. For new submission, the allowed character set is alphanumeric with "-". For older data, a wider character set was allowed
Submissions Only Allow: union of BaseTrkSubType	
VersionType base is xsd:string -enumeration: 2017	Version attribute for the current ADES schema must be "2017"

3 Groups

This is the documentation for the groups. Groups are a convenient way of organizing rules in complicated structures, used as components of other groups or of complex types. Unlike complex types, groups may appear inside other complex types or groups with no tag. Because groups act a bit like types, their names are all CamelCase with the first letter capitalized.

grouptype: MPCID

4 Complex Types

This is the documentation for the complex types, which may be used directly as similarly-named elements or as components of other complex types and groups. Unlike a group, a complex type is always the only thing inside a tag. The names of complex types, like groups and simple types, are all CamelCase with the first letter capitalized.

complextype: NamesType
