# Tables of ADES Tags and Structures

October 25, 2023

#### 1 Table of ADES Elements

XML elements are the things which appear as XML tags, such as <permID> value </permID>. The ones in this table are all top-level elements, which means they can be the root of their own XML document and thus validated against XSD individually. The last element in the table, "ades," is intended to be used as the root element for every XML document used for interchange. All elements are written in camelCase with the first character not capitalized.

Elements and their Descriptions

ADES observation sub-elements		
Name	Type	Description
permID	PermIDType	IAU permanent designation,
		i.e., IAU number
provID	ProvIDType	MPC provisional designation
		(unpacked form) for
		unnumbered object
artSat	StringTypeW25	Name of an artificial satellite
${ m trkSub}$	TrkSubType	Observer-assigned tracklet
		identifier, unique within
		submission batch.
obsID	ObsIDType	Globally Unique Observation
		ID assigned by MPC.
${ m obsSubID}$	ObsIDType	Observation identifier,
		optionally included with the
		submission, that is unique to
		a given observing program.
		This element is intended to
		support extended analyses
		associated with major
		observing programs.
${ m trkID}$	TrkIDType	Globally Unique alphnumeric
		tracklet ID assigned by MPC

trkMPC	TrkIDType	MPC-internal tracklet
UKWIFC	11kiD i ype	
		identifier, used in cases where the value of the trkSub
		element should be considered
1	M. 1 m	deprecated.
$\mathbf{mode}$	ModeType	Mode of optical and offset
	G T	observations.
$\operatorname{stn}$	StationType	Obervatory code from MPC
	G	list.
$\operatorname{trx}$	StationType	Station code of transmiting
		antenna.
rcv	StationType	Station code of receiving
		antenna.
sys	SysType	Coordinate system for station
		coordinates and covariance.
$\operatorname{ctr}$	SPICEIDType	Origin of the reference
		system. Use public SPICE
		codes, e.g., 399 is the
		geocenter, 10 is the Sun
		center. Note; sys=WGS84
		implies ctr=399
pos1	DecimalTypeW14	Position of observer per sys,
		1st value
pos2	DecimalTypeW14	Position of observer per sys,
		2nd value
pos3	DecimalTypeW14	Position of observer per sys,
		3rd value
posCov11	DoubleTypeW21	11 covariance per sys
posCov12	DoubleTypeW21	12 covariance per sys
posCov13	DoubleTypeW21	13 covariance per sys
posCov22	DoubleTypeW21	22 covariance per sys
posCov23	DoubleTypeW21	23 covariance per sys
posCov33	DoubleTypeW21	33 covariance per sys
	~ <del>-</del>	
prog	ProgType	Program code as assigned by

(Continued)	m: m	TITO 1: C.11 1 1:
obsTime	TimeType	UTC time of the observation
		in ISO 8601 format, i.e.,
		yyyy-mm-ddThh:mm:ss.ssZ.
${f rmsTime}$	PosDecimalTypeW8	Random component of the
		obsTime $1\sigma$ uncertainty in
		seconds as estimated by the
		observer.
ra	RAType	J2000.0 Astrometric
		equatorial right ascension in
		decimal degrees.
dec	DeclinationType	J2000.0 Astrometric
		equatorial declination in
		decimal degrees. Positive
		DEC values may optionally
		include a + sign
raStar	RAType	J2000.0 RA in decimal
		degrees of the occulted star
decStar	DeclinationType	J2000.0 DEC in decimal
		degrees of the occulted star
obsCenter	ObsCenterType	Center of offset observation
		may be planet or other body
		with PermID or ProvID
deltaRA	DecimalTypeW10	Measured $\Delta(RA\cos DEC)$ in
	7 -	arcseconds. For offset
		measurements of a satellite
		with respect to its primary,
		or for occultation
		observations with respect to
		the star in rectangular
		coordinates, J2000.0 frame.

DecimalTypeW10   Measured ΔDEC in arcseconds. For offset measurements of a satellite with respect to its primary, or for occultation observations with respect to the star in rectangular coordinates, J2000.0 frame	(continued)

			astrometric reduction.

rmsDist	PosDecimalTypeW6	Random component of the
THEDIST	1 osbecimai i ype w o	_
		distance $1\sigma$ uncertainty in
		arcseconds as estimated by
		the observer as part of the
		image processing and
D.4	D D 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	astrometric reduction.
rmsPA	PosDecimalTypeW6	Random component of the
		polar angle $1\sigma$ uncertainty in
		degrees as estimated by the
		observer as part of the image
		processing and astrometric
		reduction.
rmsCorr	CorrDecimalType	Correlation between RA and
		DEC or dist and PA that
		may result from the
		astrometric reduction. This
		is derived from the RA-DEC
		or dist-PA covariance matrix,
		where the off-diagonal term is
		rmsCorr * rmsRA * rmsDec or
		rmsCorr * rmsDist * rmsPA.
delay	PosDecimalTypeW14	Observed radar delay value
		in seconds.
rmsDelay	PosDecimalTypeW6	Measurement $1\sigma$ uncertainty
		in µs for radar delay
doppler	DecimalTypeW14	observed radar doppler value
		in Hz
rmsDoppler	PosDecimalTypeW6	Measurement $1\sigma$ uncertainty
		in Hz for radar doppler
astCat	CatType	Star catalog used for the
		astrometric reduction or for
		the occulted star in the case
		of occultation observations.)
mag	DecimalTypeW8	Apparent Magnitude in
		specified band
		1

rmsMag	PosDecimalTypeW6	Apparent magnitude $1\sigma$
Illisiviag	1 OsDeciliai i ype w o	
1 1	D. 1/D	uncertainty in magnitudes.
band	BandType	Filter designation for
		photometry.
photCat	CatType	Star catalog used for
		photometry measurements.
photAp	PosDecimalTypeW6	Photometric aperture radius
		in arcseconds.
nucMag	LogicalType	Nuclear magnitude flag for
		comets. 0 for total
		magnitude (i.e., for most
		archival comet observations
		and all asteroid
		observations), 1 for nuclear
		magnitude. Primarily used
		for archival data as photAp
		should be used to
		communicate this
		information in the new
		standard
$\log$ SNR	DecimalTypeW6	$\log_{10}$ of the signal-to-noise
		ratio of the source in the
		image integrated on the
		entire aperture used for the
		astrometric centroid.
shapeOcc	LogicalType	For occultation observations,
•		a flag to indicate that the
		observation reduction
		assumes a shape-based
		(non-circular) plane-of-sky
		cross-section. False implies
		that a circular cross section
		was assumed.
		was assumed.

(commuea)		
seeing	PosDecimalTypeW6	Size of seeing disc in
		arcseconds, measured at Full
		Width Half Maximum
		(FWHM) of target point
		spread function (PSF).
exp	PosDecimalTypeW6	Exposure time in s. Total
		exposure time in the case of
		stacked image detections
m rmsFit	PosDecimalTypeW6	RMS of fit of astrometric
		comparison stars in
		arcseconds.
nStars	PosIntegerTypeW6	Number of stars in
		astrometric fit.
com	LogicalType	Flag to indicate that the
		observation is reduced to the
		center of mass. 0 implies a
		measurement to the peak
		power position, which is
		usually interpreted as the
		leading edge of the target,
		with the reflection point
		being modeled one object
		radius prior to the center of
		mass.
frq	FrequencyType	Carrier reference frequence in
		MHz
ref	RefType	Standard reference field used
		for citations.
disc	DiscType	Discovery flag; '*' marks a
		new discovery record; '+'
		marks the first measurement
		of a previously observed
		object; otherwise not present
	121	0 / 1

(commuda)		
subFrm	SubFrmType	Reference frame for the
		original submission of
		reported angular
		measurements.
subFmt	SubFmtType	Format in which the
		observation was originally
		submitted to the MPC, e.g.,
		M92 for MPC1992 format or
		A17 for the current standard
		standard. Filled by the MPC
		according to a list provided
		and maintained by the MPC.
precTime	TimePrecType	Precision in millionths of a
		day of the reported
		obeservation time for
		archived MPC1992 data
		records
$\operatorname{precRA}$	RaDecPrecType	Precision in seconds of the
		reported RA for archived
		MPC1992 data records.
precDec	RaDecPrecType	Precision in arcseconds of the
		reported DEC for archived
		MPC1992 data records.

(COITITIUCU)	Dog Dogima IT-ma VIIO	Estimated time uncertainte
uncTime	PosDecimalTypeW8	Estimated time uncertainty in seconds. Unlike the
		preceding RMS fields, which
		indicate random errors, this
		field indicates a presumed
		level of systematic clock
		error. NB: This field is
		generally only to be used to
		communicate exceptions and
		problems with clock
		calibration and is not
		intended to be used in
		routine submissions where
		clock errors are not a
		significant source of
		astrometric error.
notes	NotesType	A set of one-character note
		flags to communicate
		observing circumstances.
remarks	RemarkType	Comment field provided by
		the observer. This field can
		be used to report additional
		information that is not
		reportable in the notes field,
		but that may be of relevance
		for interpretation of the
		observations.
deprecated	DeprecatedType	Marks deprecated
		observation.
localUse	LocalUseType	For user-defined fields in
		observations
observations residual sub-elements		
Name	Type	Description

(commuea)		
orbProd	StringTypeW100	Orbit producer. Can be
		institution, individual, or
		even email address,
		e.g.'MPC'
orbID	StringTypeW25	Local reference for orbit, e.g.,
		'JPL 7' or 'MPO 12345'.
resRA	DoubleTypeW7	Residuals in RA cos DEC in
		arcseconds
resDec	DoubleTypeW7	Residuals in DEC in
		arcseconds
selAst	SelResType	Inclusion/rejection flag for
		astrometry
sigRA	PosDecimalTypeW6	Adopted RA $\cos$ DEC $1\sigma$
		uncertainty in arcseconds.
sigDec	PosDecimalTypeW6	Adopted DEC $1\sigma$ uncertainty
		in arcseconds.
sigCorr	CorrDecimalType	Adopted correlation between
		RA cos DEC and DEC.
sigTime	PosDecimalTypeW8	Adopted $1\sigma$ time uncertainty
		in seconds.
biasRA	DecimalTypeW8	Adopted RA cos DEC bias in
		arcseconds.
biasDec	DecimalTypeW8	Adopted DEC bias in
		arcseconds.
biasTime	DecimalTypeW10	Adopted time bias in s.
photProd	StringTypeW100	Producer of photometric
		residuals. Can be institution,
		individual, or even email
		address, e.g. 'MPC'
resMag	DoubleTypeW7	Photometric residual in
		magnitudes
selPhot	SelResType	Inclusion/rejection flag for
		photometry
sigMag	PosDecimalTypeW6	Adopted $1\sigma$ magnitude
		uncertainy in magnitudees.
	1 (11	·

biasMag	DecimalTypeW6	Adopted photometric bias in
	J P	magnitudes
$\overline{\mathrm{photMod}}$	PhotModType	Description of the

#### 2 Table of Restricted Simple Types

Restricted simple types are a single XML value with some additional restrictions, such as requiring an decimal value to be in some range (such as 0.0 to 90.0) or requiring a string to be from an enumerated list. Some of these restrictions, such as the possible station string values, will eventually be pulled out of MPC-provided files and referenced over the web.

# Simple Types with their Restrictions Description

Type

AlphaNumericType base is StringType -pattern: [A-Za-z0-9_]*  BandType base is AlphaNumericType -maxLength: 3  CatType base is StringType -pattern: [.A-Za-z0-9_]* -maxLength: 8	AlphaNumericType restricts the field to only the ASCII upper- and lower-case letters, ASCII numbers and underscores  MPC maintains a list of bands for magnitude observations  MPC maintains a list of current astrometry and photometry catalogs
CorrDecimalType base is xsd:decimal -minInclusive: -1.0 -maxInclusive: 1.0 -pattern: [+\-]?(0 1)(\.[0123456789]{0,11	Decimal in range [-1.0, 1.0] with no more that 11 digits after the decimal point. Decimal point is optional, but if present the integer portion must be present (i.e., '.1' and '1' are proving a point in the present (i.e., '.1' and '1' are proving a point (i.e., '.1') are proving a point (i.e., '.1') and '1' are proving a point (i.e., '.1') a
DecimalType base is xsd:decimal -pattern: [+\-]?(0 ([1-9][0-9]*))(\.[0-9]	Decimal in range (-inf, +inf). Decimal point is optional, but if present the integer portion must be present (i.e., '.1' and '1' are invalid.)
DecimalTypeW6 base is DecimalType -pattern: [+\-]?[0123456789\.]{1,5}	DecimalType with no more than 5 characters plus optional sign
DecimalTypeW8 base is DecimalType -pattern: [+\-]?[0123456789\.]{1,7}	DecimalType with no more than 7 characters plus optional sign
DecimalTypeW10 base is DecimalType -pattern: [+\-]?[0123456789\.]{1,9}	DecimalType with no more than 9 characters plus optional sign
DecimalTypeW14 base is DecimalType -pattern: [+\-]?[0123456789\.]{1,13}	DecimalType with no more than 13 characters plus optional sign

-enumeration: ICRF\_KM

-enumeration: IAU

Type

This is used by the pos[123] and

poscov[123][123] elements to determine the

meaning of coordinates. WGS84, ITRF and

and ICRF\_KM are for space-based stations.

IAU are for ground-based stations, ICRF\_AU

Type	Description
TimeHelp	Restrict dateTime to 4-digit positive years
base is xsd:dateTime	and Z for UTC. Allow no more than
-pattern: \d{4}-\d{2}-\d{2}T\d{2}:\d{2}:\	microsecond precision.
TimePrecType	TimePrecType is used to describe the
base is xsd:decimal -enumeration: 100000 -enumeration: 10000 -enumeration: 1000 -enumeration: 100 -enumeration: 10 -enumeration: 1 -enumeration: 41667 -enumeration: 4167 -enumeration: 694 -enumeration: 69	precision of a historical Time value when the orignal measurement was made in fractional days. The accuracy is in millionths of decimal day, so 10 means 1/100,000 of a day, a little better than a second. The large values are only for historic data on comets. Historic data may also have been reported to integer hours (41667), tenths of hours (4167), integer minutes (694) or tenths of minutes (69). This
TimeType union of TimeHelp LeapSecondsHelp ————————————————————————————————————	is not allowed in new submissions.  TimeType is an ISO8601 UTC time in the format yyyy-mm-ddThh:mm:ss(.s+)Z. The trailing Z means it is interpreted as UTC. It is not a restriction of xsd:dateTime because that does not properly validate leapseconds. It allows positive 4-digit years and validates the Gregorian calendar for all dates. Note this works because xsd or's all the restrictions and accepts any match. LeapSecondsHelp matches any leapsecond before 2017 and any potential new leapseconds from 2017.
TrkIDType base is StringType -pattern: [-A-Za-z0-9_]* -maxLength: 12	A trkID is up to twelve alphanumeric characters
BaseTrkSubType base is StringType -pattern: [-A-Za-z0-9_]* -maxLength: 8	A trkSub is up to eight alphanumeric or - characters

OldTrkSubType base is StringType -pattern: [-?+@.()/\\A-Za-z0-9_]* -maxLength: 8	A trkSub is up to eight funky characters
TrkSubType union of BaseTrkSubType OldTrkSubType	A trkSub is up to eight characters. For new submission, the allowed character set is alphanumeric with "-". For older data, a wider character set was allowed
Submissions Only Allow: union of BaseTrkSubType	
VersionType base is xsd:string -enumeration: 2022	Version attribute for the current ADES schema must be "2022"

#### 3 Groups

This is the documentation for the groups. Groups are a convenient way of organizing rules in complicated structures, used as components of other groups or of complex types. Unlike complex types, groups may appear inside other complex types or groups with no tag. Because groups act a bit like types, their names are all CamelCase with the first letter capitalized.

# grouptype: MPCID
