## Tables of ADES Tags and Structures

March 20, 2024

#### 1 Table of ADES Elements

XML elements are the things which appear as XML tags, such as <permID> value </permID>. The ones in this table are all top-level elements, which means they can be the root of their own XML document and thus validated against XSD individually. The last element in the table, "ades," is intended to be used as the root element for every XML document used for interchange. All elements are written in camelCase with the first character not capitalized.

#### 2 Table of Restricted Simple Types

Restricted simple types are a single XML value with some additional restrictions, such as requiring an decimal value to be in some range (such as 0.0 to 90.0) or requiring a string to be from an enumerated list. Some of these restrictions, such as the possible station string values, will eventually be pulled out of MPC-provided files and referenced over the web.

Historic data may also have been reported to integer hours (41667), tenths of hours (4167), integer minutes (694) or tenths of minutes (69). This
TimeType union of TimeHelp LeapSecondsHelp ————————————————————————————————————	is not allowed in new submissions.  TimeType is an ISO8601 UTC time in the format yyyy-mm-ddThh:mm:ss(.s+)Z. The trailing Z means it is interpreted as UTC. It is not a restriction of xsd:dateTime because that does not properly validate leapseconds. It allows positive 4-digit years and validates the Gregorian calendar for all dates. Note this works because xsd or's all the restrictions and accepts any match. LeapSecondsHelp matches any leapsecond before 2017 and any potential new leapseconds from 2017.

#### 3 Groups

This is the documentation for the groups. Groups are a convenient way of organizing rules in complicated structures, used as components of other groups or of complex types. Unlike complex types, groups may appear inside other complex types or groups with no tag. Because groups act a bit like types, their names are all CamelCase with the first letter capitalized.
